DEPTH FIRST SEARCH

Aim :
Solve any problem using depth first search

Code :

```
def dfs(graph, node, visited):
    if node in visited:
        return
    visited.add(node)
    print(node)
    for neighbor in graph[node]:
        dfs(graph, neighbor, visited)

graph = {
    'A': ['B', 'C'],
    'B': ['D', 'E'],
    'C': ['F']
    'D': [],
    'E': ['F'],
    'F': []
}
visited = set()
dfs(graph, 'A', visited)
```

Output :

A
B
D
E
F
C
